

Boingo Wi-Fi Mobile Snapshot

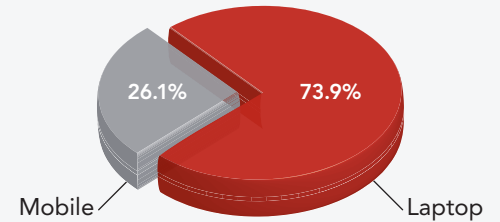

Boingo Wireless is the world's largest network of Wi-Fi hotspots, and operates more airport Wi-Fi networks – nearly 60 – than any other company. Airports remain the number one venue for Wi-Fi usage worldwide, so Boingo is in a unique position to understand consumer usage of Wi-Fi on both laptops and mobile devices at these locations.

Over the past 24 months, we have seen an explosion of device-based users associating with Boingo's airport Wi-Fi network. More than a quarter of all network associations are now coming from a mobile device, driven primarily by the iPhone. In addition, Boingo Mobile users – customers who subscribe to a Boingo monthly Wi-Fi plan – are consuming an average of 114MB of data via Wi-Fi per month. Boingo Mobile customers now use Wi-Fi on average 12 times per month.

If you have any questions, or would like to see other data, please contact us at wifisnapshot@boingo.com.
